

Substrate Wetting Agent DCA-29523

 dcachem.com

Introduction

DCA-29523 is a modified organic silicon compound designed to decrease the system's surface tension and provide excellent substrate wetting. It offers low foam stability and supplies antifoam ability.

Physicochemical Data

- Chemical composition: Polyether Modified Silicone
- Appearance: Yellow transparent liquid
- Active content: 100%
- Solvent: Water: None

Product features

- Enhances leveling and finish quality
- Improves substrate wetting for better adhesion.
- Supports excellent recoatability.
- Offers effective antifoam properties with low foam stability.

Application areas

DCA-29523 is suitable for water-wood-paint, industry water-borne coatings, UV-curable coatings, and printing ink systems

Addition Method

The recommended dosage is around 0.1-1%.

Packaging and storage:

25KG plastic drum, stored in a cool and dry place.

Note: The purpose of this manual is to provide basic product information to technical personnel involved in the development of coatings, inks, pesticides, and other industries. It is intended for research and reference use and does not carry any warranties. Please conduct

preliminary tests to assess its suitability.
