

Silicone Antifoam DCA-4091

dcachem.com/portfolio/silicone-antifoam-dca-4091

Introduction

DCA-4091 is a organic silicone defoamer for water based systems. It has strong defoaming ability with low addition level, high efficiency, low possibility to cause crater, special designed for high viscosity water borne system.

Physicochemical Data

- Chemical composition: Modified silicone solution
- Appearance: viscous transparent liquid
- Active content: 60%
- Solvent: Dipropylene glycol mono methyl ether

Product features

- Excellent defoaming capability
- High efficiency
- Low possibility to cause crater
- Specialty for high viscosity

Application areas

Suitable for various solvent-based coating systems, including but not limited to the following application areas:

- Epoxy system
- UV-curable systems

Similar Products: BYK-019

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

It can be added at any stage of production, and adding it during the dispersion stage helps with pigment wetting. Recommended dosage: 0.1-2.0% of the total formulation, generally 0.3-0.8% of the total formulation in most cases.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.
