

Silicone Leveling agent DCA-1122

dcachem.com/portfolio/silicone-leveling-agent-dca-1122

Introduction

DCA-1122 is an organo-modified silicone oil widely used in various solvent-based systems. It contains -OH functional groups, making it particularly suitable for PU and amino systems where it can participate in cross-linking to improve anti-adhesive properties of the system. It is especially suitable for elastic paint systems, providing excellent elastic and smooth feeling, helping with leveling, and also offering excellent anti-graffiti properties.

Physicochemical Data

- Chemical composition: Acrylic ester-modified silicone oil
- Appearance: Yellowish slightly cloudy liquid
- Active content: 100%
- Solvent: None

Product features

- Good leveling
- Anti-stick
- Anti-graffiti
- Excellent slipperiness

Application areas

DCA-1122 is especially suitable for all solvent-based system

- Suitable for elastic paint systems
- PU coating system
- Amino coating system

Similar Products: Tego-5000

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

The amount added varies depending on the specific application system, generally between 0.1-1% of the total amount, and can be added at any stage of production.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.
