

Silicone Leveling agent DCA-1225

dcachem.com/portfolio/silicone-leveling-agent-dca-1225

Introduction

DCA-1225 is a modified organosilicon compound with acrylic ester double bonds, suitable for photocuring systems. It is used to improve the anti-stick and anti-graffiti properties of the system, and can also be used in solvent-based PU coating systems to provide excellent slipperiness and help with leveling and anti-graffiti effects.

Physicochemical Data

- Chemical composition: Acrylic ester-modified silicone oil
- Appearance: Yellowish slightly cloudy liquid
- Active content: 100%
- Solvent: None

Product features

- Good leveling
- Anti-stick
- Anti-graffiti
- Excellent slipperiness

Application areas

DCA-1225 is especially suitable for photocuring systems and solvent-based PU coatings.

Similar Products: Tego-2500

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

The amount added varies depending on the specific application system, generally between 0.1-1% of the total amount, and can be added at any stage of production.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.
