

Silicone Leveling agent DCA-1434

dcachem.com/portfolio/silicone-leveling-agent-dca-1434

Introduction

DCA-1434 is a polyether-modified organosilicon compound with a high silicon content. When used in coating systems, it provides excellent tactile sensation and defoaming properties without affecting recoatability. Compared to typical silicone tactile agents, DCA-1434 needs to be tested for compatibility with the resin when used in gloss systems.

Physicochemical Data

- Chemical composition: Polyether-modified silicone oil.
- Appearance: Light yellow transparent liquid
- Active content: 100%
- Solvent: None

Product features

- Excellent leveling ability
- Help for defoaming
- Need to be tested compatibility when used in **gloss** system
- Not affect recoatability

Application areas

DCA-1436 can be widely used in solvent system and UV system

Similar Products: DC-54

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

It can be added at any stage of production

Recommended dosage: 0.1-1.0% of the total formulation

Packaging and storage:

25KG iron drum, stored in a cool and dry place.
