

# Silicone Leveling agent DCA-156

[dcachem.com/portfolio/silicone-leveling-agent-dca-156](http://dcachem.com/portfolio/silicone-leveling-agent-dca-156)

## Introduction

DCA-156 is a polyether-modified organosilicon compound with excellent compatibility with various resins. It has outstanding substrate wetting ability, excellent leveling effect without compromising recoatability, and exceptional touch and anti-cratering properties. DCA-156 has a particularly low VOC content, meeting tobacco standards, and is suitable for ink systems for cigarette packs

## Physicochemical Data

- Chemical composition: Polyether-modified silicone oil.
- Appearance: Light yellow transparent liquid
- Active content: 100%
- Solvent: None

## Product features

- Excellent leveling ability
- Help for defoaming
- Not effect recoatability
- Good compatibility with various resins
- Anti-cratering properties

## Application areas

It is suitable for UV-curable coatings and can be used in both solvent-based and water-based systems.

Suitable for ink systems for cigarette packs

## Similar Products: Tego-432

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

## Addition Method

It can be added at any stage of production

Recommended dosage: 0.1-1.0% of the total formulation

**Packaging and storage:**

25KG iron drum, stored in a cool and dry place.
