

Substrate Wetting Agent DCA-2961

 dcachem.com/portfolio/substrate-wetting-agent-dca-2961

Introduction

DCA-2961 is a modified polyether derivative suitable for aqueous systems, providing excellent dynamic surface tension and low foam stability, especially suitable for systems that require rapid surface tension reduction.

Physicochemical Data

- Chemical composition: Modified polyether derivative
- Appearance: Light yellow viscous liquid
- Active content: 100%
- Solvent: Water: None

Product features

- **Rapid Reduction in Surface Tension:** Ideal for applications requiring quick decreases in surface tension.
- **Highly Effective in Aqueous Systems:** Optimized for water-based paints and inks.
- **Versatile Dosage Options:** Effective within a broad range of 0.1-1%, adaptable to various stages of production.

Application areas

DCA-2961 is suitable for Water-based paints, water-based ink systems

Addition Method

Depending on the system, generally 0.1-1% of the total amount, can be added at any stage of production.

Packaging and storage:

25KG plastic drum, stored in a cool and dry place.

Note: The purpose of this manual is to provide basic product information to technical personnel involved in the development of coatings, inks, pesticides, and other industries. It is intended for research and reference use and does not carry any warranties. Please conduct

preliminary tests to assess its suitability.
