

Dispersant DCA-6151

 dcachem.com/portfolio/dispersant-dca-6151

Introduction

DCA-6151 is a polymeric dispersant designed suitable for inorganic pigment. It could decrease the viscosity rapidly with low foaming, meanwhile, increase the paint film gross.

Physicochemical Data

- Chemical composition: Copolymer with pigment unique affinity group
- Appearance: Light yellow transparent liquid
- Active content: 40%
- Solvent: Water

Product features

- DCA-6151 dispersant suitable for inorganic pigment dispersion in water borne coating systems.
- DCA-6151 is a polymeric dispersant so that could make the system low foaming

Application areas

DCA-6151 is recommended to use in water borne coating systems

Addition Method

Usually, it should be charged before the grind stage during the produce, with **1% to 5%** dosage to inorganic pigment

Packaging and storage:

25KG plastic pail, stored in a cool and dry place.

Note: The purpose of this manual is to provide basic product information to technical personnel involved in the development of coatings, inks, pesticides, and other industries. It is intended for research and reference use and does not carry any warranties. Please conduct preliminary tests to assess its suitability.
